

PLASTIC CORNER BELT

TOP characteristics

- Very reliable
- Wide range of carrier types available
- Extremely flexible
- Approved for food processing in accordance with FDA/USDA and VO EC 1935/2004

Our plastic corner belts allow for flexible changes in direction, from 35–180 degrees. Depending on the size, multiple individual segments are linked together to form the belt. The belts can be fitted with different carriers and guide elements depending on the intended application.

Applications

- Can be used in nearly every production and packaging phase
- The small deflection diameter allows for easy transfer of small products
- Spare belts for all known curve machines

Materials used

- Available with different coating materials, e. g.
- polyurethane
 - PVC
 - silicon

Various carrier types available

Dimensions

- Widths of up to 4 000 mm

Versions

- Made of various materials
- As a right- or left-handed curve
- With springs, carrier pulleys, elastic strips, loops or punched
